A third ISCRiM book is on its way!

Emerging Themes in Supply Chain Risk Management

A Collection of Case Studies and Practices

Editors: Omera Khan, University of Manchester, UK,
and George A. Zsidisin, Bowling Green State University

Introduction

There is considerable evidence that the failure to manage supply chain risk effectively can have a significant negative impact on organisations. The consequences of supply chain risk include not just financial losses but also interruption to operations, reduction in product quality, damage to property and equipment, loss of goodwill with customers and suppliers, damaged reputation with the wider public, and delivery delays. There is also evidence that economic, political and social developments over the past decade appear to be increasing the chances that disruptions will occur as supply chains are becoming longer and more complex. The threat of terrorism, such as 9/11, disease, such as the foot and mouth outbreak in the UK, and natural disasters, such as hurricane Katrina which devastated New Orleans, all have the power to disrupt supply chains.

The purpose of this book, which is to be published by J. Ross Publishers, is to illustrate a collection of timely cases on emerging themes and processes in managing supply chain risk. Some of these themes include Globalisation, Transportation Networks, Product Design and Innovation and Risk Mitigation, Tools and Techniques. These factors have had a dramatic impact on the changing risk profile of organisations and within each theme there will be a collection of cases that provide an overview of supply chain risk management practices.

Objective of the Book

The book will present high quality cases on supply chain risk management applications and practice. It is designed to complement and extend the previous ISCRiM texts, continuing to provide a source of leading edge research from contributions by academics and practitioners around the world. The chapters of this book will present a collection of cases on emerging themes in supply chain risk management, from illustrating business competitiveness, to risk rooted in transportation networks, to the alignment of product design and the supply chain to mitigate risk.

(Continues on page 2)

(Continued from page 1)

Target Audience

The intended audiences are students, academics, researchers, professionals, and experts who are working or intend to work in the fields of supply chain risk management, business continuity management, strategic management or business management.
